

Dear Customer,

FILM / FABRIC CLEANING GUIDE FOR SOLASOLV[®] AND ROLASOLV[®] PRODUCTS

Under normal circumstances dusting with a non-abrasive dry duster is all that is required. Fingerprints, grease and more stubborn marks can be carefully removed with white spirit and a soft cloth, followed by a further wiping over with a soft non-abrasive cloth dipped in clean soapy water.

If any type of film / fabric becomes very dirty it can be carefully wiped over with a soft non-abrasive cloth and clean water with a little soap or detergent. This will do no harm just so long as the film / fabric is allowed to dry completely before retracting. Excess water should be removed as it will leave a water mark when dry.

If you have any further questions or queries relating to cleaning of the film / fabric please send an email to sales@solasolv.com.

Many thanks,

The Solar Solve Team
